A short, descriptive title for your article

Jane Smith[1] **and Alex Chen**[2]

[1]**Department of Physics, Fictional State University**
[2]**Institute for Applied Research, Fictional State University**

ABSTRACT

Replace this abstract with a concise, self-contained summary of the article: the problem addressed, the method used, and the main result. Keep it under 300 words and free of citations or material not covered in the main text.

Keywords: keyword one, keyword two, keyword three

INTRODUCTION

Start the introduction here. Motivate the problem, situate it against prior work with a citation (Lees and Roe, 2010), and state the contribution of the article in the last paragraph.

METHODS AND MATERIALS

Describe the approach taken here.

RESULTS

Present the findings. Figure 1 shows a placeholder figure — replace it with your own artwork — and Table 1 shows a basic table.

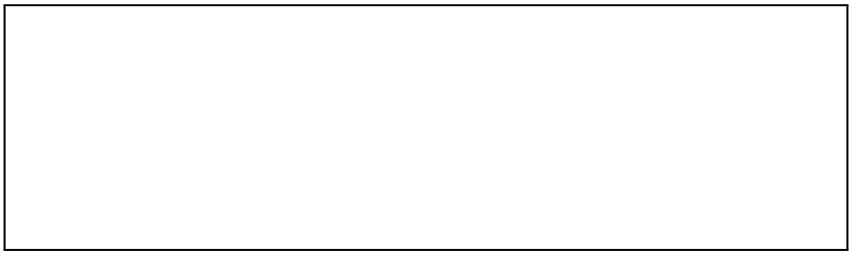

Figure 1. Replace this placeholder with your own figure.

Item	Quantity
Widgets	4
Gadgets	7

Table 1. An example table.

Mathematics

LaTeX is well suited to typesetting mathematics. Let $X_1, X_2, \ldots, X_n$ be independent and identically distributed with $\mathrm{E}[X_i] = \mu$ and $\mathrm{Var}[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{1}{n}\sum_{i}^{n} X_i$$

denote their mean. As $n \to \infty$, $\sqrt{n}(S_n - \mu)$ converges in distribution to $\mathcal{N}(0, \sigma^2)$.

DISCUSSION

Interpret the results and compare against prior work.

CONCLUSION

Summarise the contribution and, if relevant, point to future work.

ACKNOWLEDGMENTS

Acknowledge funding sources, colleagues, or reviewers here.
