A Legible Result Communicated Over Coffee

A. Researcher

B. Collaborator

Department of Computational Something, University of Somewhere

Introduction

This poster is built on Rafael Bailo's Better Poster template, which implements Mike Morrison's #betterposter layout: the main finding stated in giant text in the centre, with supporting detail relegated to narrow side columns. Replace this section with the motivation for the work.

Methods

- Describe the approach, dataset, or apparatus here.
- A second bullet, for a second step of the method.
- A third, for whatever completes the picture.

Result Table

Condition	Metric A	Metric B
Baseline	0.42	12.3
Proposed	0.61	9.7

Conclusion

One or two sentences stating the takeaway a passer-by should leave with, even if they read nothing else on the poster.

The proposed method cuts error rate by 30%
over the strongest baseline,
while using **half the training data**.

Discussion

Summarise what the main finding means, and how it compares to prior work. This is also the natural place for limitations or threats to validity.
