Abstract

This thesis argues that a clean, distraction-free thesis style can carry the same structural rigour as a full document class. We demonstrate the approach with a worked chapter, a cited source, and a compiled bibliography.

1 Introduction

1.1 Motivation

Thesis styles are often bundled with heavyweight document classes. This starter shows that a style package layered on a standard class, such as `scrreprt`, is enough to produce a clean, well-structured document, as argued by Knuth [Knu84].

1.2 Structure of this Document

The remaining chapter extends this with a short worked example.

2

2 Related Work

Prior systems addressing long-document typesetting are surveyed in Knuth [Knu84].
