Freeform Slides on a Grid

Why a Grid, Not a Stack

Beamer lays content in a single vertical column per frame. Gridslides places blocks at explicit (x, y) grid coordinates on a fixed canvas, so two or three pieces of content can sit side by side without a `columns` environment.

Grid unit: 4mm per step
Canvas: 32 × 24 units
Positioning: absolute, not flow-based

Three Blocks, Three Corners

Top left
Notes can sit anywhere on the canvas.

Top right
No column balancing needed.

Bottom centre
A caption under both.

An Equation, Placed

$$y = mx + c$$

$$\nabla \cdot \mathbf{E} = \frac{\rho}{\varepsilon_0}$$

Equations are their own block type (\eq), so they can be positioned next to explanatory text rather than centred on their own line.

Built-Up Reveals

First point, visible from step 1.

Built-Up Reveals

First point, visible from step 1.

Second point, visible from step 2.

Built-Up Reveals

First point, visible from step 1.

Second point, visible from step 2.

Third point, visible from step 3.
